Mercedes Sprinter

Lots of room for large operations

Mobile Command Post ELW1/ELW2 - UgÖEL/Ug-SanEL

Mercedes Sprinter: Lots of room for large operations
Custom modifications and upgrades in compliance with regulations

The most eye catching feature of the new MERCEDES SPRINTER is the large space for your custom modifications. The standard design is a split interior with a radio communication area and a meeting area. These areas may be flexible divided by a solid wall or by sliding doors. The information and communication equipment is easily accessible in compartments within the radio communication area, which is equipped with 2 to 3 work centers for the use of different radio frequency circuits and networking computers.

During driving operation the vehicle features up to 8 seats meeting safety regulations using a unique system of switching and removing of the seats.

A side attached spacious awning protects against rain and sun, the external mounted air conditioning system can be used for cooling and heating of the vehicle.

As a matter of course is the progressive equipment for digital radio system, just as the external 220 volts power supply, network and telephone connection. The equipment can be operated independently with a powerful sine converter until connected to a external powers source.

The integrated antenna mounting panel supports an external antenna mast for excellent connection, although the antenna mast can be mounted inside the vehicle upon request. The high-performance safety/emergency light system and the distinctive look of custom lettering and decals attracts the vehicle attention.

1. Ergonomic arranged control panels

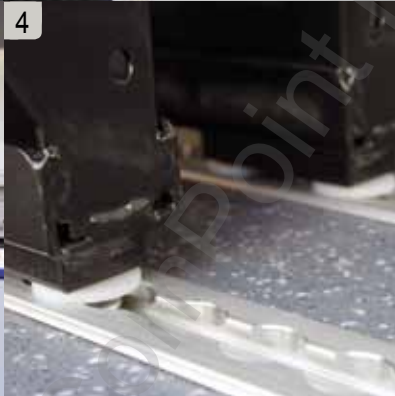

3. Large and comfortable radio work centers

2. Extensive information and communication equipment available

4. Individual slide rail systems for seat attachment

5. Lot of storage capacity in the tail of the vehicle and individual seating

6. High-performance air conditioning system with heating system
